This lavish book marks the 40th anniversary of Barthes' renowned work *Camera Lucida* in 2020. This snapshot is known as the winter garden photograph. Barthes discusses it at length in *Camera Lucida*, but never reproduces it. It is one of the most famous unseen photographs in the world.

Picture This

Molly Bang's brilliant, insightful, and accessible treatise is now revised and expanded for its 25th anniversary. Bang's powerful ideas—about how the visual composition of images works to engage the emotions, and how the elements of an artwork can give it the power to tell a story—remain unparalleled in their simplicity and genius. Why are diagonals dramatic? Why are curves calming? Why does red feel hot and blue feel cold? First published in 1991, *Picture This* has changed the way artists, illustrators, reviewers, critics, and readers look at and understand art.

Front-End Vision and Multi-Scale Image Analysis

Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence. Three major classes of optic flow computation techniques can be discriminated (see for a good overview Beauchemin and Barron [Beauchemin1995]): gradient based (or differential) methods; phase based (or frequency domain) methods; correlation based (or area) methods; feature point (or sparse data) tracking methods; In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method. The method, originally proposed by Florack and Nielsen [Florack1998a] is known as the Multiscale Optic Flow Constrain Equation (MOFCE). This is a scale space version of the well known computer vision implementation of the optic flow constraint equation, as originally proposed by Horn and Schunck [Horn1981]. This scale space variation, as usual, consists of the introduction of the aperture of the observation in the process. The application to stereo has been described by Maas et al. [Maas 1995a, Maas 1996a]. Of course, difficulties arise when structure emerges or disappears, such as with occlusion, cloud formation etc. Then knowledge is needed about the processes and objects involved. In this chapter we focus on the scale space approach to the local measurement of optic flow, as we may expect the visual front end to do.

Eco-Architecture IX

Architecture is very multi-disciplinary, attracting many different professions. This is reflected in the contributions contained in this volume that were originally presented at the 9th International Conference on Harmonisation between Architecture and Nature. The included works review the challenges and new opportunities of contemporary architecture as a result of advances in design and new building technologies, as well as the development of new materials. Never before in history have architects and engineers had such a range of new processes and products open to them. In spite of that, the construction industry lags behind all others in taking advantage of a wide variety of new technologies. This is understandable, due to the inherent complexity and uniqueness of each architectural project. Advances in computer and information systems, including robotics, offers the possibility of developing new architectural forms, construction products and building technologies that are just now starting to emerge. Changes have also taken place in the way modern society works and lives, due to the impact of modern technologies. Patterns of work have been disrupted and changed, affecting transportation and the home environment. The demand is for a new type of habitat that can respond to the changes and the consequent requirements in terms of the urban environment. Such topics are dealt with as building technologies, design by passive systems, design with nature, cultural sensitivity, life cycle assessment, resources and rehabilitation and many others including case studies from many different places around the world.

Specialized Assault Units Of The World War I Western Front:

This thesis will use a comparative study of the German Storm trooper battalions and the Canadian trench raiders in order to examine the dynamics of the World War I battlefield, the role of military culture in adaptation in order to acknowledge and act on the requirements of battlefield innovation. The purpose is to determine what key factors contributed to the tactical effectiveness of specialized assault units on the Western Front. The military cultures of these armies comprised the logical and innovative principles that were fundamental in the tactical effectiveness of these elite assault units by making revolutionary developments in force structure, institutional support, personnel selection, decentralized leadership, and training on small-unit tactics and advanced weaponry. Did these tactics create similar or different effects for each army? What factors did these armies use to organize and employ these assault units? To answer these questions, several areas will be examined: (1) force structure, (2) institutional support, (3) personnel selection, and (4) training on decentralized leadership, small unit infiltration tactics, and advanced weaponry. Both armies had different backgrounds and situations. The German Army's Sturm battalions represented an army-wide institutionalization of organization, selection and technique. The Canadian Corps' trench raiders were based on the Canadian Corps' homogeneous structure that separated itself from the BEF in developing its own doctrine, training schools, organization, and tactical innovations.

Chop Suey and Sushi from Sea to Shining Sea

The essays in Chop Suey and Sushi from Sea to Shining Sea fill gaps in the existing food studies by revealing and contextualizing the hidden, local histories of Chinese and Japanese restaurants in the United States. The writer of these essays show how the taste and presentation of Chinese and Japanese dishes have

evolved in sweat and hardship over generations of immigrants who became restaurant owners, chefs, and laborers in the small towns and large cities of America. These vivid, detailed, and sometimes emotional portrayals reveal the survival strategies deployed in Asian restaurant kitchens over the past 150 years and the impact these restaurants have had on the culture, politics, and foodways of the United States. Some of these authors are family members of restaurant owners or chefs, writing with a passion and richness that can only come from personal investment, while others are academic writers who have painstakingly mined decades of archival data to reconstruct the past. Still others offer a fresh look at the amazing continuity and domination of the “evil Chinaman” stereotype in the “foreign” world of American Chinatown restaurants. The essays include insights from a variety of disciplines, including history, sociology, anthropology, ethnography, economics, phenomenology, journalism, food studies, and film and literary criticism. *Chop Suey and Sushi from Sea to Shining Sea* not only complements the existing scholarship and exposes the work that still needs to be done in this field, but also underscores the unique and innovative approaches that can be taken in the field of American food studies.

Reading Picture Books with Children

A new, interactive approach to storytime, The Whole Book Approach was developed in conjunction with the Eric Carle Museum of Picture Book Art and expert author Megan Dowd Lambert's graduate work in children's literature at Simmons College, offering a practical guide for reshaping storytime and getting kids to think with their eyes. Traditional storytime often offers a passive experience for kids, but the Whole Book approach asks the youngest of readers to ponder all aspects of a picture book and to use their critical thinking skills. Using classic examples, Megan asks kids to think about why the trim size of Ludwig Bemelman's *Madeline* is so generous, or why the typeset in David Wiesner's Caldecott winner, *The Three Pigs*, appears to twist around the page, or why books like Chris Van Allsburg's *The Polar Express* and Eric Carle's *The Very Hungry Caterpillar* are printed landscape instead of portrait. The dynamic discussions that result from this shared reading style range from the profound to the hilarious and will inspire adults to make children's responses to text, art, and design an essential part of storytime.

This ambitious and vivid study in six volumes explores the journey of a single, electrifying story, from its first incarnation in a medieval French poem through its prolific rebirth in the nineteenth and twentieth centuries. *The Juggler of Notre Dame* tells how an entertainer abandons the world to join a monastery, but is suspected of blasphemy after dancing his devotion before a statue of the Madonna in the crypt; he is saved when the statue, delighted by his skill, miraculously comes to life. Jan Ziolkowski tracks the poem from its medieval roots to its rediscovery in late nineteenth-century Paris, before its translation into English in Britain and the United States. The visual influence of the tale on Gothic revivalism and vice versa in America is carefully documented with lavish and inventive illustrations, and Ziolkowski concludes with an examination of the explosion of interest in *The Juggler of Notre Dame* in the twentieth century and its place in mass culture today. In this concluding volume, Ziolkowski explores the popularity of *The Juggler of Notre Dame* from the 1930s through the Second World War, especially in the Allied Resistance. Its popularity in the United States was subsequently maintained by figures as diverse as Tony Curtis and W. H. Auden, and although recently the story and medievalism have lost ground, the future of both holds promise. Presented with great clarity and simplicity, Ziolkowski's work is accessible to the general reader, while its many new discoveries will be valuable to academics in such fields and disciplines as medieval studies, medievalism, philology, literary history, art history, folklore, performance studies, and reception studies.

In *Shanghai Filmmaking*, Huang Xuelei invites readers to go on an intimate, detailed, behind-the-scenes tour of the world of early Chinese cinema. She paints a nuanced picture of the Mingxing Motion Picture Company, the leading Chinese film studio in the 1920s and 1930s, and argues that Shanghai filmmaking involved a series of border-crossing practices. Shanghai filmmaking developed in a matrix of global cultural production and distribution, and interacted closely with print culture and theatre. People from allegedly antagonistic political groupings worked closely with each other to bring a new form of visual culture and a new body of knowledge to an audience in and outside China. By exploring various border crossings, this book sheds new light on the power of popular cultural production during China's modern transformation.
